# FOR DESIGN WITHOUT COMPROMISE: SPACES

Efficiency, communication, networking and mobility have evolved into factors that shape our working environment. Office spaces must meet growing requirements and be flexible to changes, to allow people to be as productive as possible within them. **spaces** is **procedes square**'s answer to the interior design challenges of tomorrow. Whether you want zones for high-concentration work, effective communication areas or team-friendly places to retreat – **spaces** can be adjusted to suit your individual needs and offers you the advantages of contemporary architecture:

**focus spaces** have the essential at their core. Design individual workplace concepts and experience for yourself the next-generation room acoustics.

**network spaces** keep your finger on the pulse of the times. This meeting point at the heart of the firm is a space for informal exchange and effective communication.

**team spaces** are the modern take on the island in the open-plan office. Enclosed room solutions for various uses coupled with useful technology make **team spaces** a dynamic place to come up with creative ideas.

All three kinds of spaces together create a coherent overall concept for productive office landscapes. Through functional elements like acoustics, multimedia, air and light you can create just the right conditions for the success of your team. **spaces** thus succeeds in balancing design and function.

Discover your options with **spaces** and inspire people with game-changing design and versatile functionality.

# FOCUS SPACES

---

# FOCUS SPACES

---

High-concentration work in a focussed atmosphere still takes up the main part of the working day. As demands on employees increase, the workplace must provide the perfect conditions.

Modern interior design is torn between open plan offices with their more efficient use of space and individual solutions which promote greater productivity. The subject of acoustic separation in particular plays a significant role, as noise is a major problem for work that demands concentration.

**procedes square** has taken up this challenge and its **focus spaces** is a solution with room acoustics that use intelligent materials to achieve a balance between absorption and screening. Design your individual office landscapes to your specifications and use our room dividers as the basis for productive working.

---

# THE PLACE FOR HIGH-CONCENTRATION WORK

---

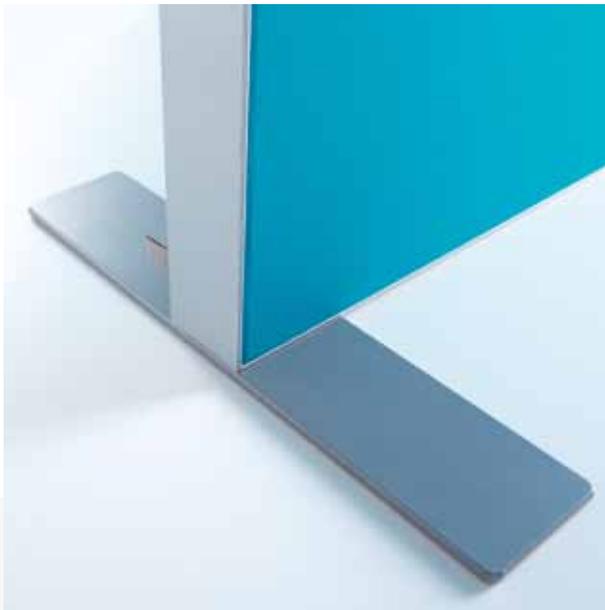

**Combination:** A successful room concept is all about balance. Combine working landscapes with places to retreat in order to create the right mix of focus and communication.

**Grounded:** **spaces** offers a wide selection of base combinations to meet your requirements. From timeless feet to panelled bases, **procedes square** has solid solutions.

**Choice of colours:** The combination of customisable textiles and high-quality aluminium lends your spaces the identity you envisage. In addition to the standard colours, we can also finish the visible surfaces of the system in your specified colours.

**Acoustics:** Conventional room divider systems do not factor in the effect of distracting sources of sound in the immediate vicinity. **spaces** takes a new approach to screening between workplaces so that the open-plan office has the potential to produce results.

**Integration:** Who can tell today what technology will still be around tomorrow? **focus spaces** serve as a platform for the integration of screens and other applications that enhance your workplace – no matter what the latest technology is.

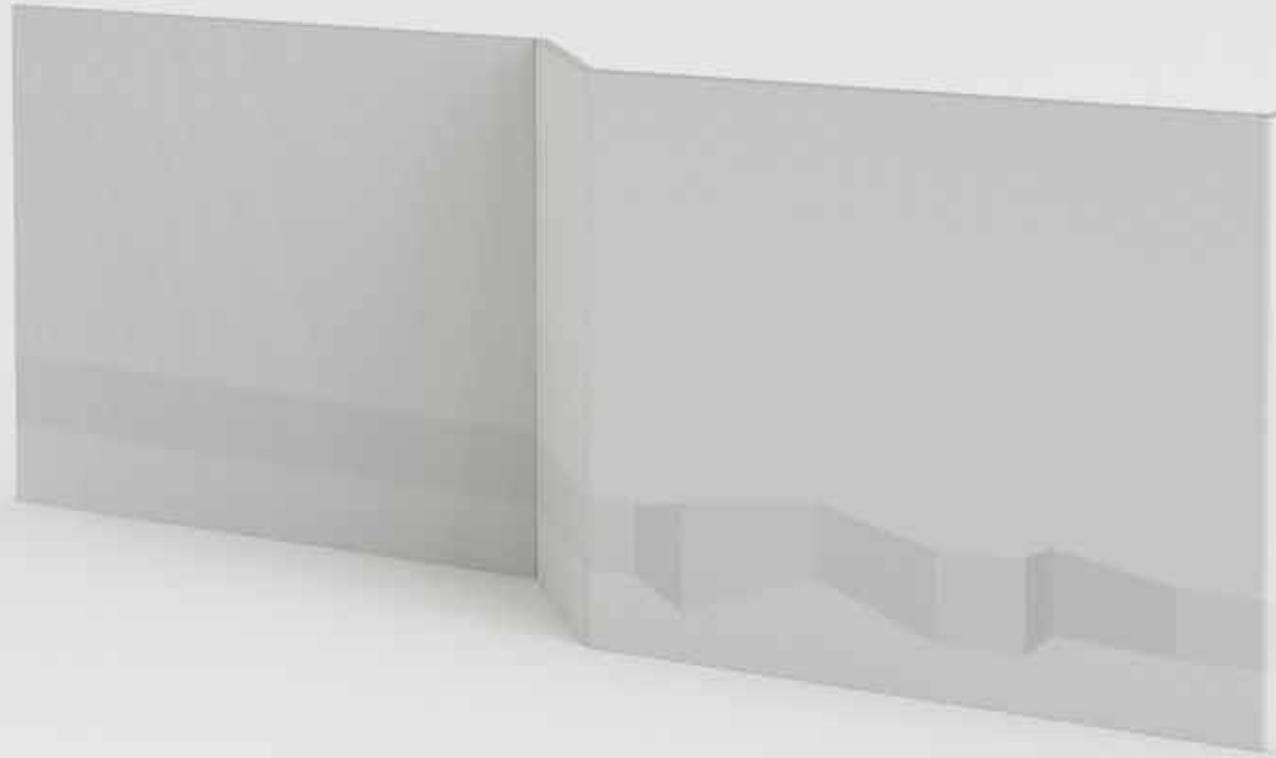

**FLEXIBILITY  
IDENTITY  
CONCENTRATION**

# NETWORK SPACES

# NETWORK SPACES

The central zone is fast becoming an essential part of the open-plan office. Between the traditional workplace and separate conference rooms, it forms the link within modern office communication.

These areas have been underrepresented in room concepts up to now. As teamwork becomes more important and work increasingly involves networking, new ways of working together have emerged in recent years, for which solutions have to be found.

**network spaces** are the ideal solution to add to the central zone. They uniquely combine flexibility, function and design, thus defining the visual and acoustic properties of the concept and creating measurable added value for team work.

---

# THE CENTRE OF EFFECTIVE COMMUNICATION

---

**Versatility:** **network spaces** do not have to conform to any hard and fast rules when it comes to form or use. Design your meeting points in line with your needs or seek advice from our partners on which **network space** best fulfils your requirements.

**Language of form:** We spend a large part of our lives in public places: why, then, should we go without design here? Discover the quality attention to detail and experience perfect textile architecture.

**Seating:** Simply match your **network space** in with your existing furniture to achieve the right layout and the right seating.

**Electrification:** These days, we have to be mobile at all times. For this reason, **network spaces** incorporate an intelligent power supply system.

**Flexibility:** All the systems from **procedes square** are highly versatile. Use existing elements to create new office landscapes without making structural changes.

# TEAM SPACES

---

# TEAM SPACES

---

The days of static room layouts are gone. The reality of work today calls for flexibility. Given that businesses are more mobile in their choice of location and leases are shorter, it is obvious that investing substantial figures in rigid room concepts has no sustainable benefit.

Room-in-room concepts, like think tanks or cubes, are an attractive way of creating rooms without compromising on flexibility. As modular constructs, **team spaces** provide an environment for discretion and productivity. In this way, they expand on the modern take on the open-plan office by offering places of retreat.

**team spaces** are dynamic room solutions with impressive functionality and considered design. You configure the dimensions or the acoustic properties of the think tank in line with your requirements. Whether used as an individual office or a creative think tank, **team spaces** are a forward-looking solution within open-plan offices as workplaces become more and more condensed.

---

# AN ISLAND FOR CREATIVE DIALOGUE

---

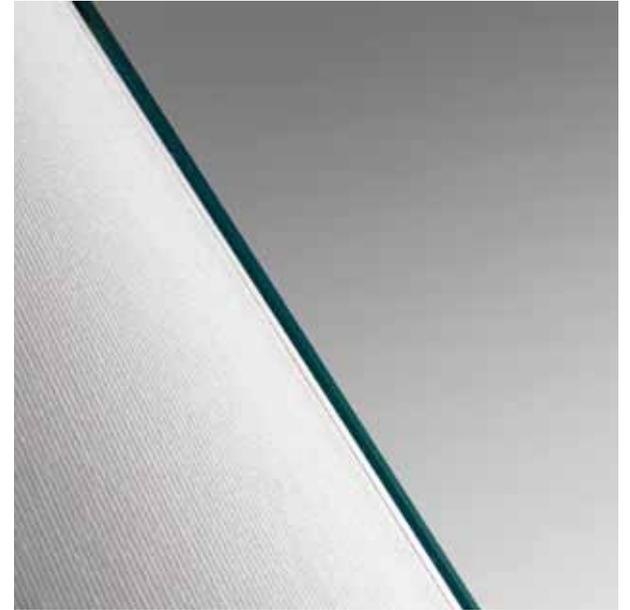

**Productivity:** If your business is to be productive as well as open-plan, a place of retreat is required. Enhance your office landscape with **team spaces**: the results will speak for themselves.

**Network:** Complex organisations live by information. Tap the potential of modern control and networking solutions in order to make your open-plan office a hub of productivity.

**Lighting:** Efficient working requires the right lighting. Select the light to suit your needs from our high-quality range.

**Transparency:** Transparent elements give room-in-room solutions the necessary openness. Graphic wraps provide the right look for your design to work on an overall level.

**Design:** The flush incorporation of glass and textiles is part of the fundamental philosophy of **spaces**. You can seamlessly integrate glass up to 12.76 mm thick into your **team space**.

**PRODUCTIVITY  
CREATIVITY  
TEAM SPIRIT**

# DESIGN + FUNCTIONS

# DESIGN

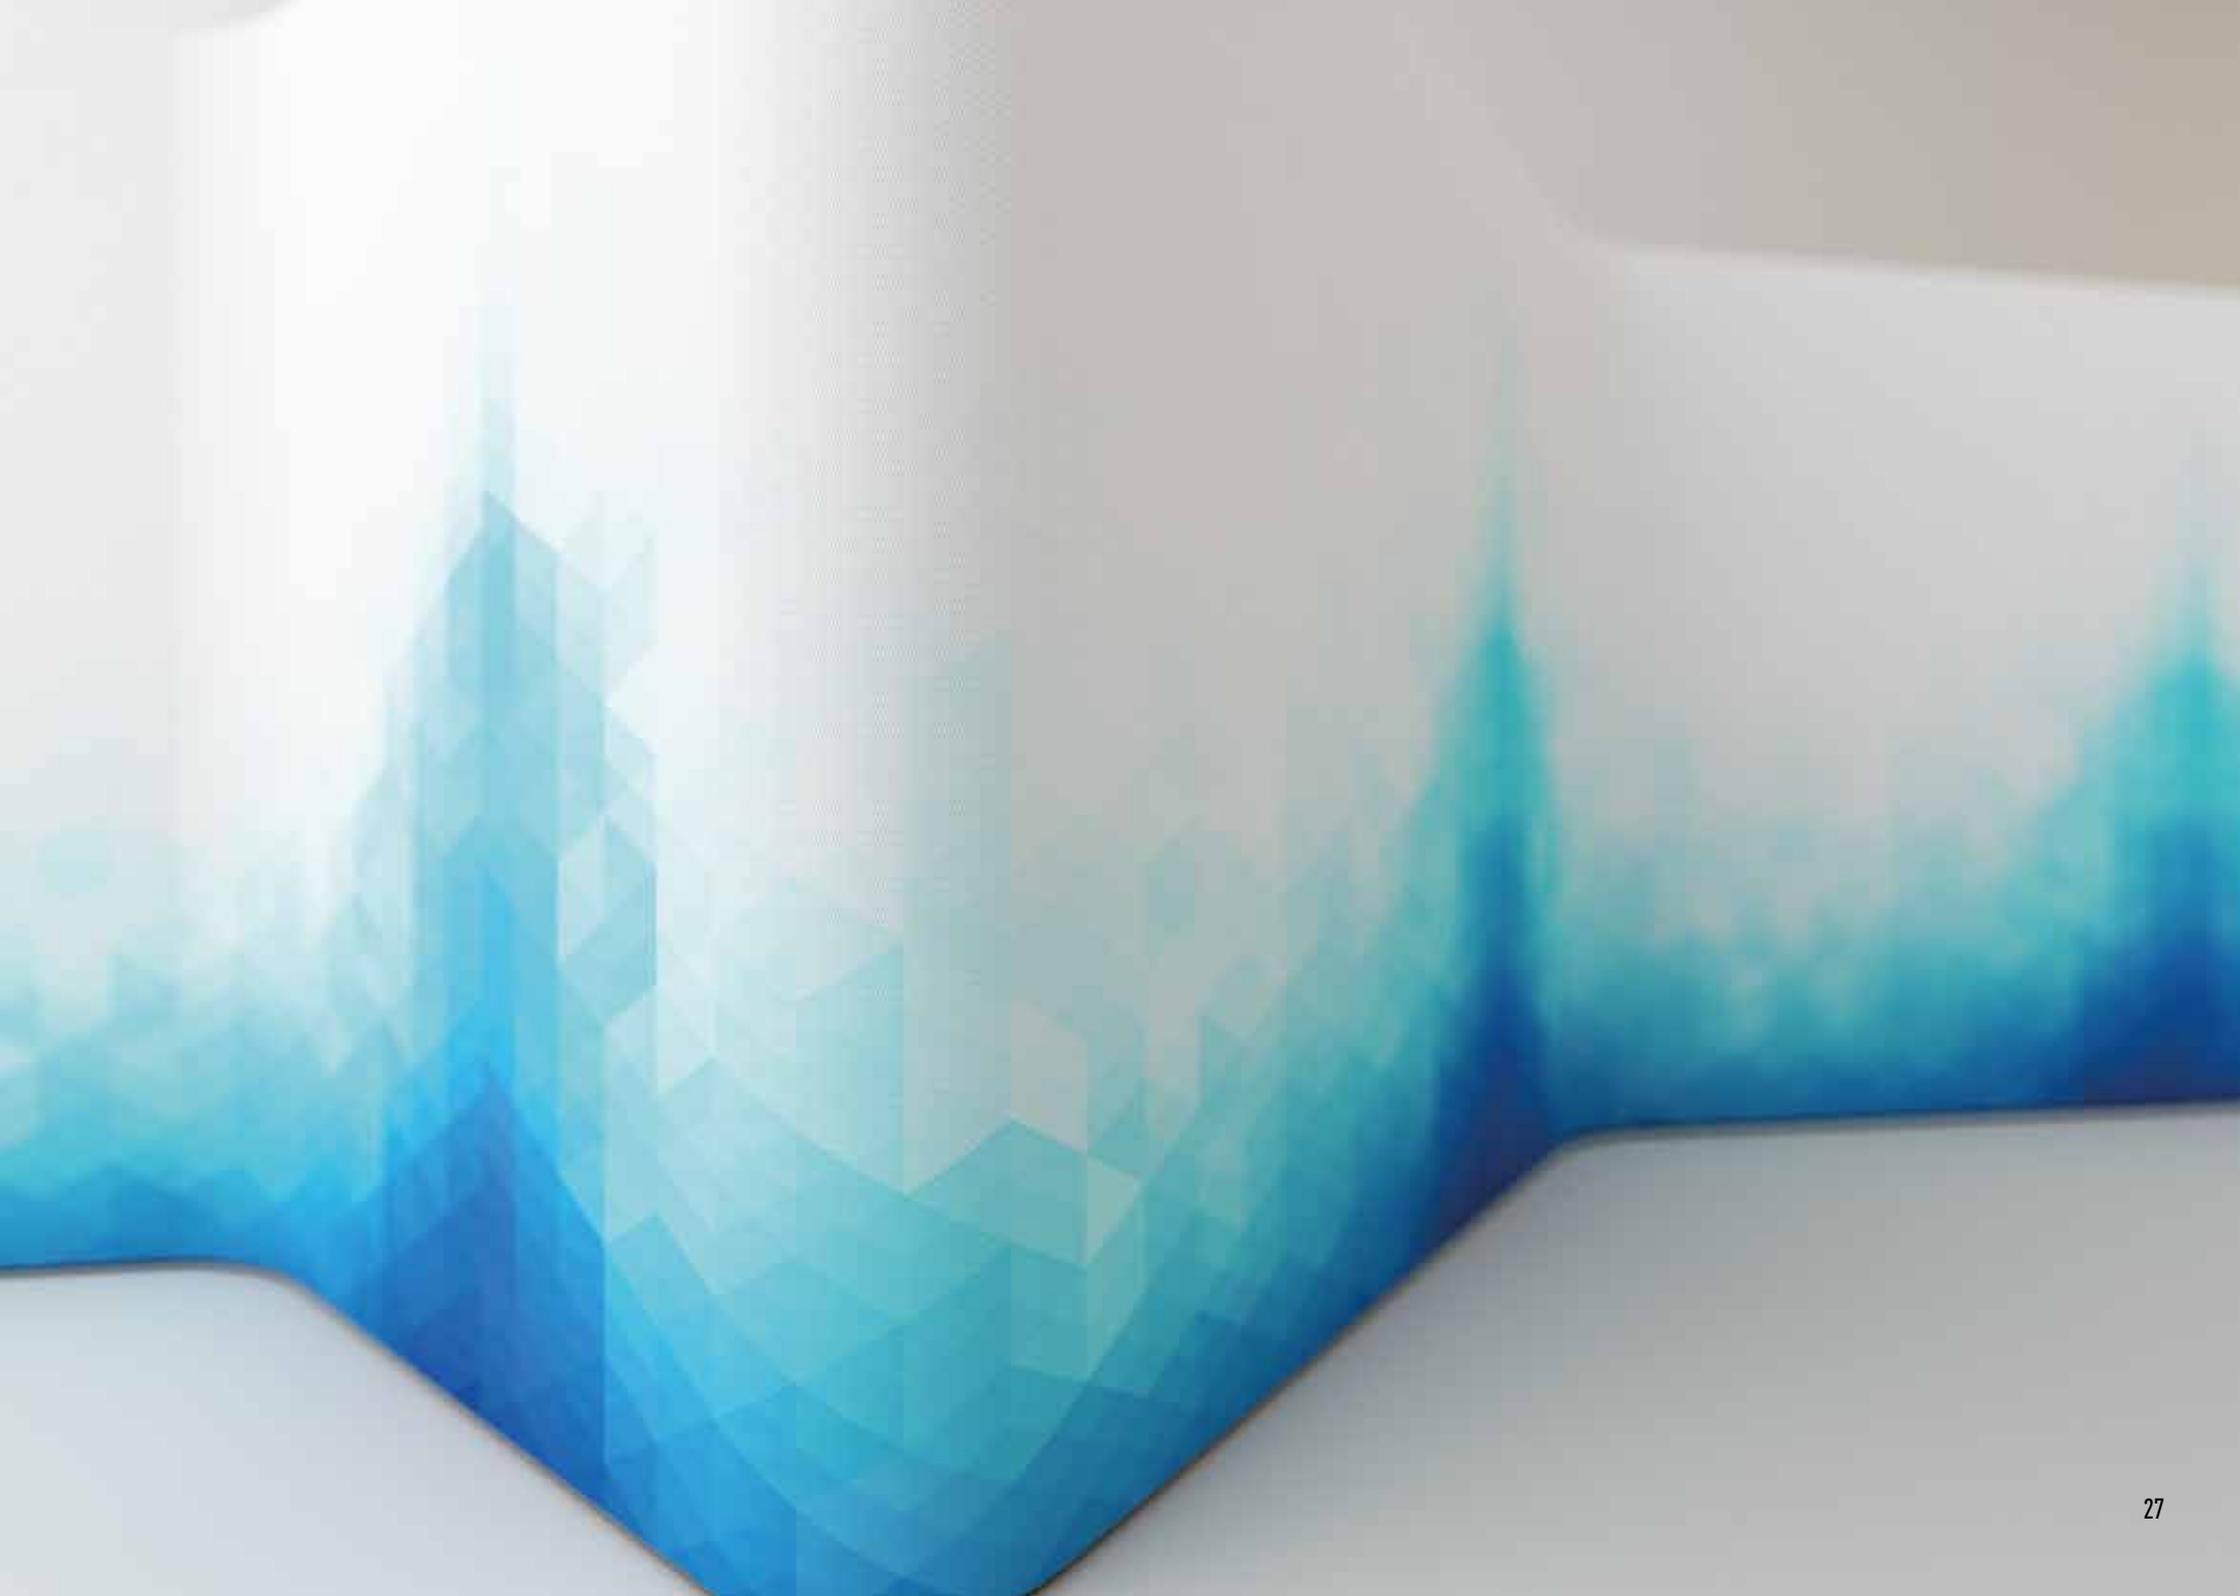

Function and aesthetics do not have to be a contradiction in terms. On the contrary: join us in our philosophy and take advantage of the design possibilities to make a brilliant impression.

A successful language of form combines aesthetics and efficiency. Details like the all-textile coverings and round corner variants bring together organic design and optimum use of space.

The textiles can be printed to your specifications in high resolutions. Graphic designs and solid colours are also possible: it just depends what visual effect you wish to create.

For covering on both sides, there is a selection of high-quality smooth or textured textiles. The custom design of **spaces** animates your rooms to impressive effect.

**spaces** also has the right solution if you're looking for transparency. By integrating glass of different thicknesses flush with the structure, you get that sense of expanse without compromising on zoning.

# ACOUSTICS

Room acoustics in the open-plan office is one of the key factors in determining how successful communal working is. The right acoustics enables workers to concentrate for longer, reduces stress and sustains motivation. The sound quality of a room therefore has an important influence on your success.

When it comes to the right acoustics, it is important to distinguish between sound insulation and sound absorption. Insulation is about creating discretion and places to retreat, by specifically reducing ambient noise. Absorption corrects the sound qualities of the room resulting in less disruptive reflections and better speech clarity.

**spaces** combine both dimensions of acoustics: sound insulation and sound absorption. Depending on your needs, there are four acoustic modules to choose from.

## **Perfect balance in the open-plan office:**

xOrb 3500 combines a focussed atmosphere with effective screening.

## **Acoustics without compromise:**

xOrb 4800 for perfect sound across all frequencies.

## **Concentrating on the essential:**

xOrb 7200 for effective room solutions in open-plan office landscapes.

## **Teamwork in discrete surrounds:**

xOrb 9000 for effective places to retreat.

## COMMUNICATION

Communication is becoming a central feature of successful businesses. **spaces** therefore supports the use of technologies that offer added value in day-to-day operations. From the room divider to the think tank, the combination of design and function creates the ideal conditions for your success.

Make room for ideas and lend your firm a communicative atmosphere. Integrate screens up to a depth of 50 mm flush with the system for effective presentations or productive video conferences.

The specially developed sound systems set new standards in the auditive setup of rooms. Give your creativity free rein in designing the audiovisual features of showrooms and lounge areas. Make a resounding impression when presenting your firm.

## AIR

A healthy room climate starts with fresh air. The room-in-room solutions from **procedes square** are constantly ventilated by a stand-alone system. Another option is integration in the existing ventilation system to ensure the room climate is to your wishes.

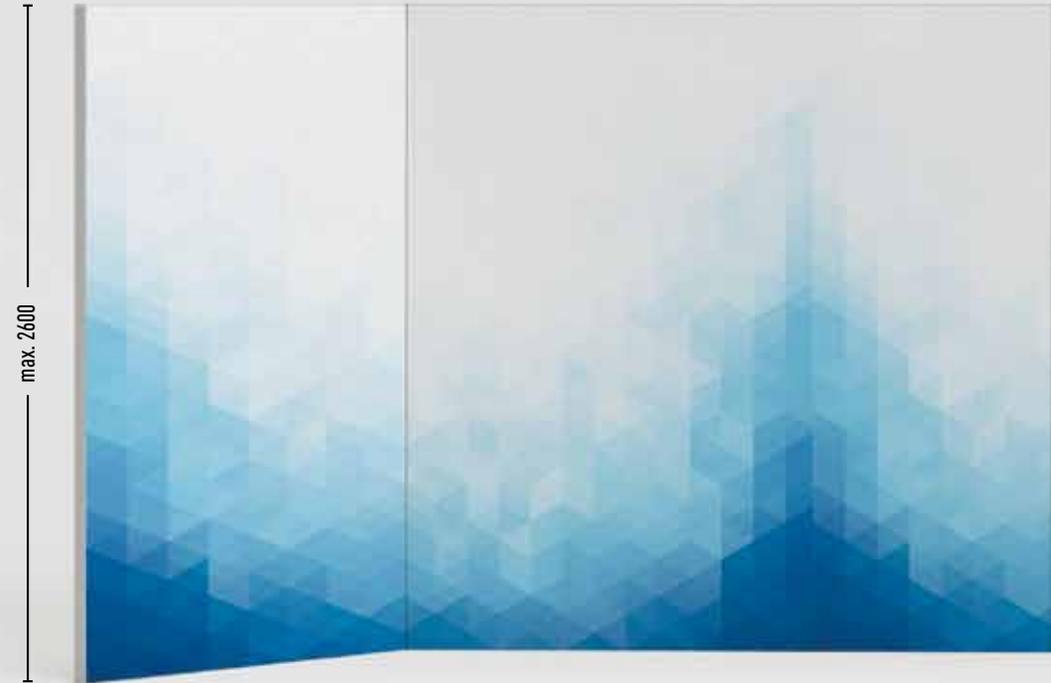

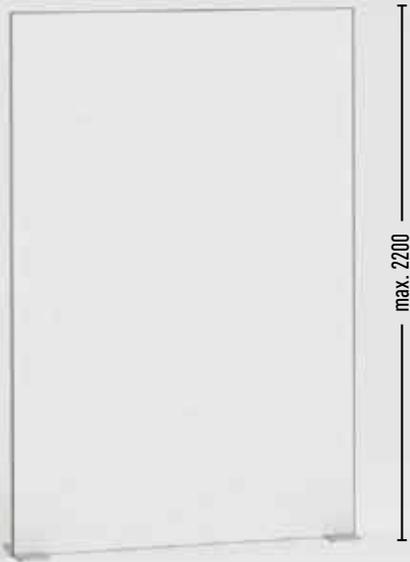

The right temperature is the second factor for a productive room climate. **spaces** uses capillary technology, for the optimum room climate all year round. Whether radiant heat is used in winter or pleasant fresh air in summer, **spaces** creates the perfect working conditions in conjunction with modern air conditioning technology.

## LIGHT

Light affects our well-being and our output. In high-concentration situations in particular, lighting can be crucial. **spaces** provides clarity – from the spot lamp to the Ambilight, from the pendant luminaire to the wall light, **spaces** has an extensive range of lighting concepts.

Depending on what the workplace requires, we can thus create the right atmosphere for inspiring work. We work with select lighting manufacturers that offer state-of-the-art technology and timeless design. Discover a whole new level of holistic design with **spaces**.

## DIMENSIONS

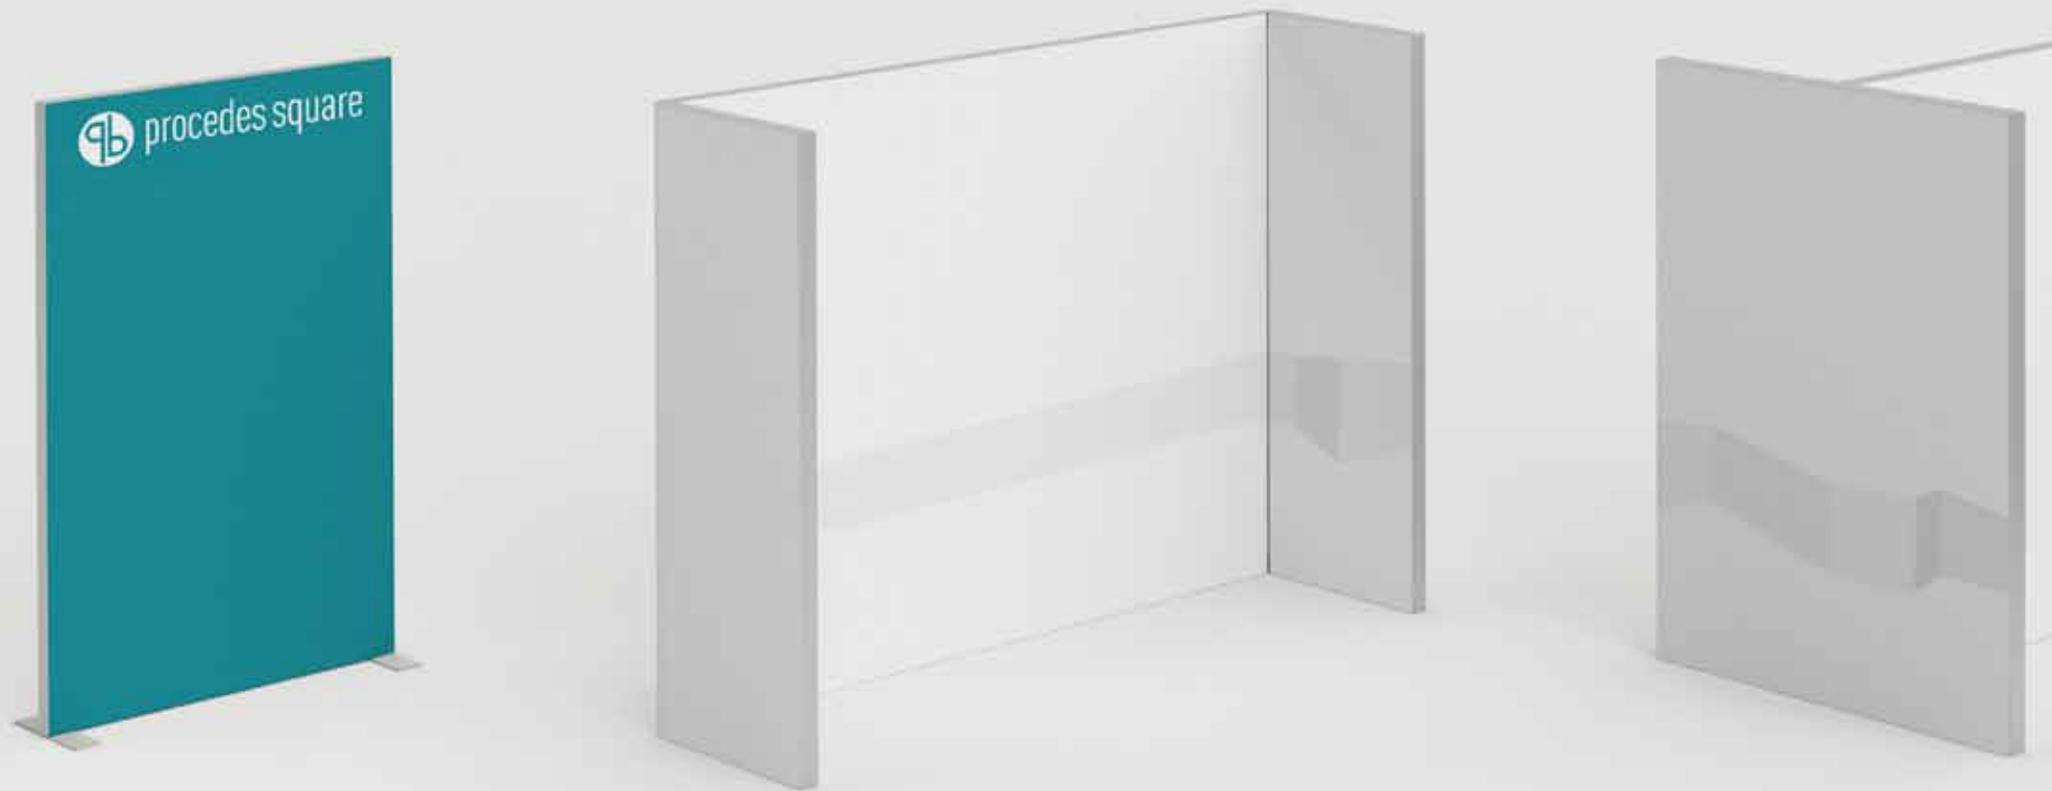

The demands on an open-plan office are as individual as the people that work in it. For this reason, **procedes square** places emphasis on tailor-made solutions. Design the products in line with your vision and make an impression with your individuality.

**focus spaces** are the basis for high-concentration working. Depending on how they are used, they can be configured up to a height of 2200 mm for visual and acoustic purposes. For requirements beyond that, our engineers are at your service and will develop bespoke solutions together with you.

**network spaces** feature an incredible range of configurations, so there are virtually no limits to the dimensions. Our local partners will be happy to assist you in planning your central zones, so that you find the perfect product for your requirements.

The size of the **team spaces** is determined by your specifications. Be it a place for two people to retreat to or an interactive place for a group to discuss new ideas, the variable modular system allows for room-in-room solutions of up to twelve square metres.

## MODULARITY

The rapid pace at which the world of work is changing presents us with a number of new challenges. Our duties are constantly changing, communication is gaining in importance and the lines between organisations are blurring. To be successful in this environment, we need room concepts that grow in step with requirements.

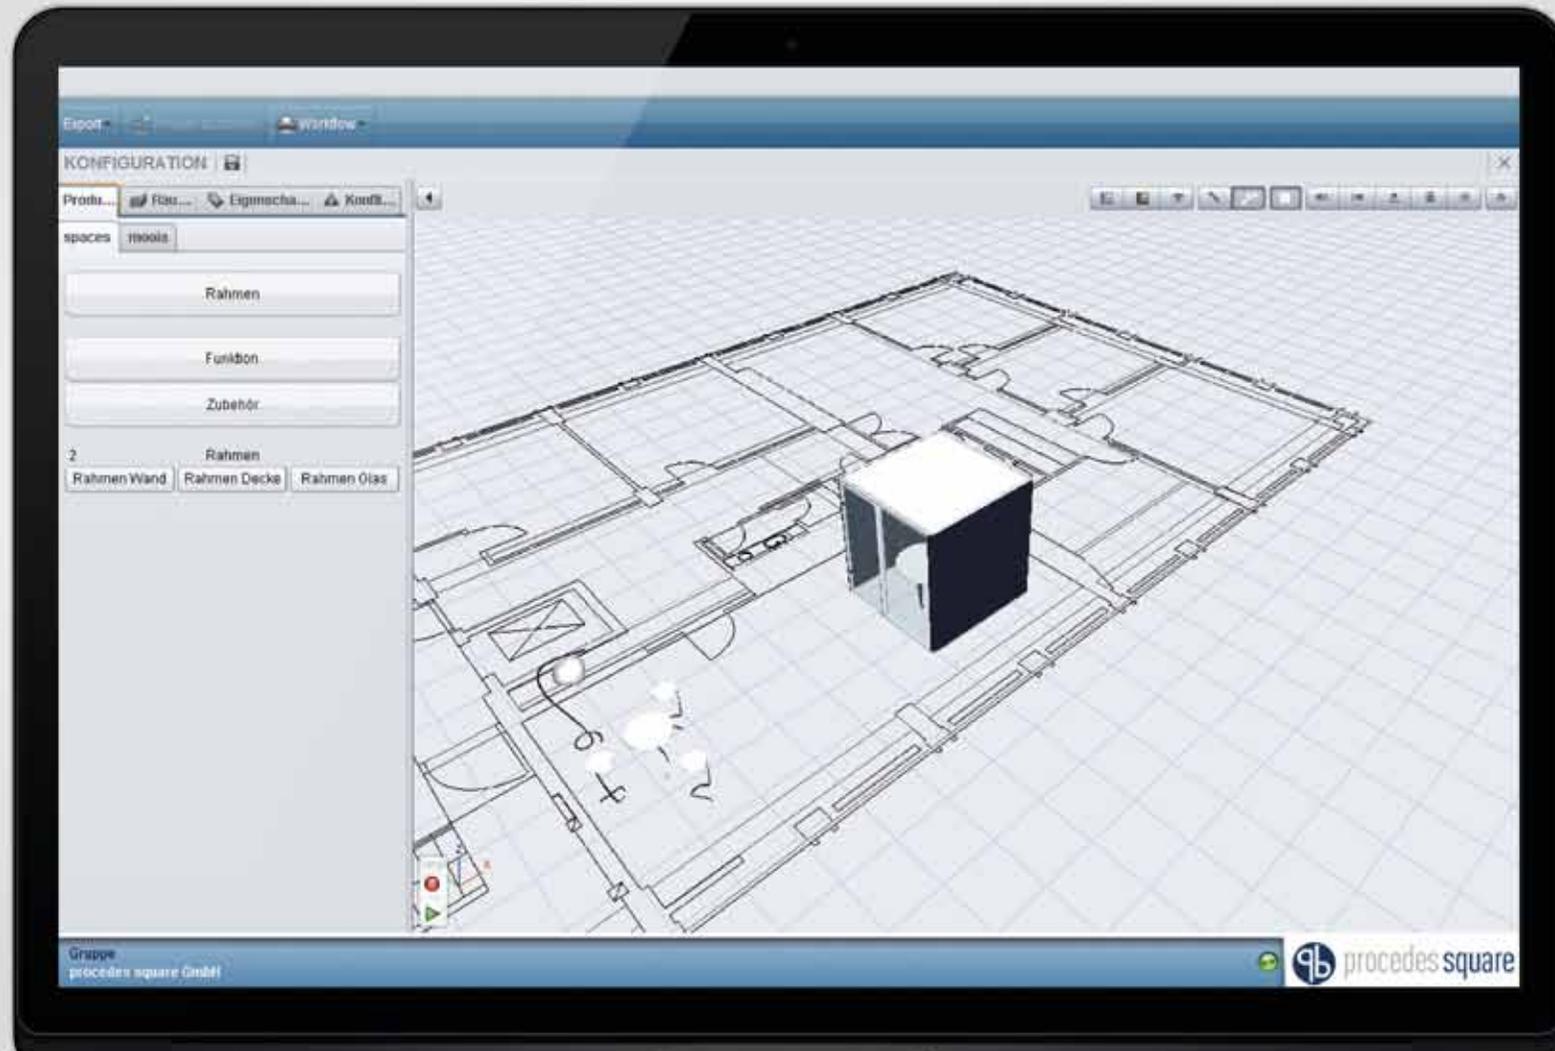

**spaces** takes account of these changes, which is why it is based on a modular principle. The system is designed so that the individual elements can be combined and expanded in various ways. This enables you to respond to new requirements quickly.

The system's connection elements make it flexible and allow existing elements to be linked in various ways to create new structures. The modular approach is the key to the sustainable and intelligent use of space.

As well as flexible use of space, function plays an important part. The modular principle allows everything from multimedia communication solutions to highly-effective absorbers to be integrated. This way, even existing applications are kept up to date and offer maximum benefit for your firm in the long run.

# SERVICE

## ADVICE

---

From the right acoustics to choosing textiles, our team is at your service to answer your questions. Take advantage of our advisory service and the extensive experience of our team to get the most out of **spaces**.

## CONFIGURATOR

---

The 3D configurator from **procedes square** transforms the planning process into an experience. Create individual office landscapes and design the surfaces intuitively. The configuration process gives you an insight into all the information you need to proceed with your design.

## SERVICES

---

**spaces** from **procedes square** gives your creativity total freedom. We will be happy to assist you with the process so you can make the most of the many options and meet your specifications. Whether for specialist installation or individual acoustic measurement, our local partners will help you to realise your ideas.

## LOCAL PRODUCTION

---

As an innovative manufacturer, we use materials of superior quality. We have a close relationship with our partners and suppliers and manufacture exclusively in Germany, and can therefore guarantee our high standards of quality all the way to the finished product.

## SUSTAINABILITY

---

As a young firm, it is our aim to think long-term. We want to create products that continue to impress in the future, so we have made it our business to conserve resources by using sustainable materials and methods.
